

May 2018

Dear Second Grade Families,

We've been studying ecosystems and life science. Students have chosen a habitat to become an expert on. Within their assigned habitat, the students will be transforming the classrooms into seven different habitats! All students will participate in a habitat museum walk. This is how second graders will be celebrating their expertise on the habitat they have been studying. You are cordially invited to attend our grade-wide Habitat Celebration on Monday, June 18<sup>th</sup> from 1:30-2:15.

Please sign in to the Annex Office and meet your child in his/her classroom. We will begin in their homeroom and will walk as a class to all second grade classrooms. Come learn about the grasslands, the rainforest, the mountains, the oceans, the forest, the desert and the polar regions. Your children have been amazing scientists and have learned many new facts about ecosystems and life science!
